October 12, 2009

Iron Eagle Technologies (IET), located in Elk Horn, Iowa (approximately 60 miles from Omaha, NE) is pleased to announce the availability of Electric Vehicle (EV) testing services for EV manufacturers through our World EVAL (Electric Vehicle Assessment Laboratory) program.

IET is a sister company of World Cal, Inc. and Liberty Labs, Inc., both of which are among the world's leading RF and EMI calibration facilities. We plan to use the knowledge of our sister companies to focus on, and become a leader of testing services for renewable energy products. As an internationally certified calibration laboratory, this is a natural progression for our companies.

To celebrate this new venture, IET is installing four EV charging stations in the small town of Elk Horn. These publicly available stations will be able to service all current plug-in electric and plug-in hybrid electric vehicles. The stations are currently the only ones available between Denver and Chicago, and this important first step in building the EV infrastructure is being done by an internationally successful and green-minded company.

We are having a ribbon cutting ceremony in Elk Horn on November 12, 2009 at 2:00 pm. We are extending this invitation to you to attend, as well as bring along your electric vehicles or EV products to showcase them at this event.

Tours of our testing facilities, which are amongst the best in the world, will also be available. If you are unable to attend, please keep us in mind for your future testing and certification needs, and let your customers know that Elk Horn, Iowa is the most EV friendly town in the Midwest!

Please RSVP by November 1, and feel free to contact myself or Trevor Schroeter if you have any questions.

Sincerely,

A handwritten signature in cursive script that reads "Michael M. Howard".
